37 CFR 1.322 & 37 CFR 1.323 REQUEST FOR CERTIFICATE OF CORRECTION

HONORABLE COMMISSIONER OF PATENTS & TRADEMARKS

Sir:

The following is a request for a certificate of correction in Serial Number 10/721,947, now Patent Number 7,006,698.

A certificate of correction under 35 USC 254 is respectfully requested in the above-identified patent.

☐ All errors were the fault of the USPTO, no fee required. In the event that a further fee is required, please charge the amount to Deposit Account No. 082025.

☐ All errors were the fault of the applicant and, accordingly, please charge \$100.00 to our Deposit Account No. 082025. In the event that a further fee is required, please charge the amount to the same Deposit Account.

☒ The errors were the fault of both the applicant and USPTO and, accordingly, please charge \$100.00 to our Deposit Account No. 082025. In the event that a further fee is required, please charge the amount to the same Deposit Account.

The exact locations where the errors appear in the patent and patent application are as follows:

On the face page, in field (75), in "Inventors", in column 1, lines 1-8, delete "Matthew James Adiletta, Worcester, MA (US); King-Wai Chow, Marlboro, MA (US); Samuel Williams Ho, Marlborough, MA (US); Robert Clint Rose, Hudson, MA (US); William Ralph Wheeler, Southborough, MA (US); Subramania Iyer Sudharsanan, San Jose, CZ (US)" and insert -- King-Wai Chow, Marlborough, MA (US); Robert Clint Rose, Hudson, MA (US) --, therefor.

On the face page, in field (57), under "Abstract", in column 2, lines 1-14, delete "An apparatus and method for performing two-pass real time video compression is provided. Tactical decisions such as encoding and quantification values are determined in software, whereas functional execution steps are performed in hardware. By appropriately apportioning the tasks between software and hardware, the benefits of each type of processing are exploited, while minimizing both hardware complexity and data transfer requirements. One key concept that allows the compression unit to operate in real time is that the architecture and pipe lining both allow for B frames to be executed out of order. By buffering B frames, two-pass motion estimation techniques can be performed to tailor bit usage to the requirements of the frame, and therefore provide a more appealing output image." and insert -- Method and apparatus for compressing video images are provided. A difference value from a current image and a prior image is calculated and compared against a variable adaptive threshold. If the calculated difference value is less than the variable adaptive threshold, the difference value is subtracted from the variable adaptive threshold to produce a new variable adaptive threshold level, and the video signal is deleted. Otherwise the variable adaptive threshold is reset to a predetermined beginning value, and the video signal is sent to an encoding and transmitting module. --, therefor.
